

Executable Roadmap

Building a roadmap that is actually being developed

Building and executing the roadmap is the most important but also the most challenging task of the Product team. There is always something that holds you back from executing your strategy and roadmap plan, in most of the cases it is the sales that are selling other things.

The workshop that empowers the Product Management's team to build executable roadmap

The workshop modules:

Preparation and Definition

Alignment meetings with the relevant stakeholders to align on company vision, targets and final agenda

Discovery and Ideation

Initial Roadmap planning, learn how to validate the plan and the assumptions using the discovery tool

Validation & Presentation

Provide feedback on the updated plan, learn how to take it to the next level with a winning PPT for sales

Impact Analysis

Blend the validation with customers, feedback from sales and research into scoring and prioritization

You will get:

- **Value based roadmap - focus on the customers needs**
- **Business based priority**
- **Hands-on and Tailored to your company and needs**
- **Deliverables are a full roadmap plan**
- **Building in-house knowledge**

ABOUT US

Shounit Lax -Swisa

In over 20 years of experience, I built and managed dozens of products and services, touching different technologies and industry verticals: Fraud, IoT, Virtualization, Cloud, BI, M.L/A.I, Blockchain, and more. I have worked with 300+ Big Enterprise customers, focusing on the B2B market, spending a major part of my time meeting customers, learning from them and pitching solutions to solve their toughest challenges.

However, the one thing I am most proud of, is the revolution I led within my organization, taking it from a feature/technology to a value-based approach. This involves changes across multiple dimensions, starting from company strategy, having an impact on the roadmap, marketing plan, sales pitch and overall company focus. This was a real revolution that changed the company revenue projections and the margins of our deals.

Following the acquisition, I was appointed as both CPO and CMO of the company, and assigned the challenging task of building a new brand, new portfolio, integrating everyone into a single product and presales team with a clear understanding of the strategy of the merged company. I was building the company's strategy and future, while at the same time considering companies for further M&As

Roe Froman

With over 15 years of experience, I managed various teams, from support to Presales, Product Management and Marketing. I defined and executed product roadmap plans across various technologies and industry verticals: 5G, Cloud and virtualization, Fraud, IoT, Big Data and more. I spent a major part of my time meeting customers, learning from them, drafting and pitching solutions to solve their toughest business and technical challenges.

I worked with over 300 Big Enterprise customers, focusing on the B2B market.

Following the latest acquisition, in which I was part of the due diligence and post-acquisition team, a complete change of work methods, strategy planning and execution was needed, together with the merger of teams from different business cultures and routines. This was an exciting lesson for me which provided me with many tools and methods required for merging and scaling companies.

I have a B.Sc in Bio-Medical Engineering from Tel-Aviv University and a MBA from Reichman University in Herzliya, majoring in Strategic consulting (a joint program with Wharton Business School) and Marketing.
